Control Panel for Online Game Server Developers and Publishers

Reduce Deployment Time and Costs

Imagine being able to do all of this with your multiplayer online gaming infrastructure:

- Deploy easy to use and secure Xbox™, Playstation® and PC game servers through a centralized web interface.
- Reduce deployment time and applying server patches to just minutes across geographically disperse game servers.
- Fully customizable framework including Java and PHP Application Program Interface (API).
- Monitor multiple servers at once and provide trend graphs and export results to CSV files.
- Eliminate down-time and improve engineering resources by detecting stopped or locked servers and unresponsive ports. Automatically restart, send email notifications or even create custom actions!
- Manage both Linux and Windows servers through a single web or mobile interface.
- Support for creating custom drivers to manage newly created beta and production servers.
- Support for high availability including clustering and load balancing.
- Detailed documentation, attentive support, training and customization services.
- Worry free management and maintenance in a single software package.

The solution: **SCInterface® for Game Servers**

Free Trial

Call us toll-free at 1-888-8-NETARUS (1-888-863-8278) to speak with an SCInterface representative today to setup your free evaluation.

Featuring PocketSCI

Manage all of your game servers through the mobile interface for SCInterface called PocketSCI.

- **Easy to Setup and Deploy**
- **Eliminate Server Down Time**
- **Fully Customizable Interface**
- **Improve Engineering Resources**
- **Decrease Deployment Time and Costs**
- **Automated Monitor and Rules Engine**

Supports Linux and Windows

The only game server control panel that supports both Linux and Windows operating systems using a centralized interface.
